

-2-

In the Specification

At page 4, line 9, change "steam" to --stream--.

In the Claims

1. (Amended) An apparatus for determining constituent components of a flowing stream of an agricultural product as it is being processed on a real time basis , the apparatus being attached to mobile agricultural equipment, the apparatus comprising:
 - a light source, arranged to irradiate a sample portion of the flowing stream of agricultural product as it is being processed with a plurality of wavelengths within a selected irradiation bandwidth within a short wave near infrared spectrum;
 - an optical pick up, arranged to receive light energy diffusely reflected from the irradiated sample portion;
 - a wavelength separator, connected to receive light from the optical pick up, and to produce spatially separated light of different wavelengths; and
 - a detector, connected to receive light from the wavelength separator, and to produce detected intensity signals indicative of light intensity [simultaneously at multiple selected wavelengths] within the [dispersing filter] wavelength separator bandwidth.
4. (Amended) An apparatus as in Claim 1 wherein the flowing stream of agricultural product is located in [a] an agricultural combine.
